

Everyday Health Survey for Adults

This survey is designed to help us learn more about how you receive information, regarding vaping, tobacco, marijuana and how they impact your behavior. Its goal is to help us understand the level of knowledge you have with respect to these topics and to get a broad understanding of usage patterns in your area. The information we collect will tell us if new educational efforts are needed or if current efforts have been worthwhile. Your responses will help us refine educational programs in your community

You will be asked to respond to several questions about what you know, how you know it, and your behaviors relevant to these subjects. This questionnaire should take approximately 10 minutes. The answers you give will be kept confidential. No one will know your name. Answer the questions based on what you really do. **Completing the survey is voluntary. If you are not comfortable answering a question, just leave it blank.**

Our pledge to you is to guarantee the confidentiality of your responses. The questions that ask about your background will be used only to describe the types of individuals completing this survey. We ask you not to put your name on any of the survey pages, and no names will ever be recorded. Your anonymous responses are being collected and processed by the Washington State University Social and Economic Science Research Center. They have a perfect record of maintaining privacy. Once they have reduced the responses to aggregate data (e.g., averages and trends), they will provide us with a report.

If you have any questions about the survey content, feel free to ask us.

Sincerely,

Handwritten signatures of Steve Meier and Richard Reardon in black ink.
